(54) DATA REPRODUCING APPARATUS, DATA RECORDING DEVICE, AND METHOD FOR REPRODUCING AND RECORDING DATA, AND PROGRAM PROVIDING MEDIUM

(57)Abstract:

PROBLEM TO BE SOLVED: To provide a data processing system which is capable of realizing exclusion structure for unjust media and contents depending on a revocation list having a plurality of different kinds of identifiers of media and contents.

SOLUTION: Both identifiers of the different categories of media and contents are stored in the revocation list to provide the structure capable of performing exclusion of both the unjust media and contents on the basis of one revocation list. A revocation object **ID**, that is, a media **ID**, and contents **ID** are arranged in one revocation list, and a plurality of unjust

contents and media are excluded using one revocation list by performing collation with the media identifier at the arrival of media and with the contents identifier when using the contents at the device side.
